

FEMA

FEMA's Hazus Team invites you to join us next week, Wednesday, March 24 for a risk assessment webinar.

[FEMA's Flood Assessment Structure Tool \(FAST\)](#) is an open source tool that rapidly analyzes structure-level flood risk using best-available science from federal agencies and engineers. FEMA's Hazus program designed the tool to provide planners, analysts and policymakers with a free and simple tool to identify flood risk in their communities using completely open methods and technology. Watch members from FEMA's Hazus program demonstrate a live analysis and hear from project leaders who have leveraged the tool for risk assessment initiatives in Hawai'i, North Carolina and West Virginia.

Read more about the webinar topic and [register here](#). Please share with all who may be interested. We look forward to connecting with you next week!

Sincerely,
The Hazus Team
