Learn How to Scope Your Mitigation Plan

09/23/2021

Log on to Learn About Starting Your Mitigation Story

Are you about to start your mitigation plan or plan update?

Right-sizing the scope of work of a mitigation plan or plan update can help your community prepare a better planning grant application or sub-application. A well-thought-out application or sub-application will lead to a stronger mitigation plan and better mitigation outcomes.

Log on to learn about "Starting your Mitigation Story" with a new recorded training from FEMA. This training provides techniques to create an effective scope of work for your next planning process. The target audience for this training is state, local, tribal and territorial partners that are going to start the hazard mitigation planning process.

Watch the training now on FEMA's YouTube channel.

This training was part of the 2021 Hazard Mitigation Assistance Partners Workshop. Other videos from this event are available online. For more information about how to create a mitigation plan, visit our website.

FEMA's National Mitigation Planning Program supports state, local, tribal and territory (SLTT) governments with risk-based mitigation planning to reduce or eliminate risks to life and property from natural hazards. The program focuses on building resilience through early and often stakeholder engagement, integration with community planning, and implementation of mitigation actions. For more information, visit Hazard Mitigation Planning | FEMA.gov.
